

DMMS
DIGITAL MONITORING & MANAGEMENT SYSTEM

MANAGEMENT OF INVENTORIES

Inventory management in a production company

- > Automation of operations of receipt, sale, write-off, movement of inventory
- > Centralized storage of information on warehouses, suppliers, inventory in respective System directories
- > Providing fast and reliable information on the availability of inventories in warehouses
- > Maintenance of stock information in the System down to the level of: nomenclature numbers, quantities, MOLE, divisions, storage locations in the warehouse
- > Ensuring inventory counts (actual existence, identified illiquidity) and data analysis
- > Integration with related systems
- > Stand-alone operation of the system on workstations without WiFi
